Methodology

The survey findings presented in this release are based on the results of interviews conducted October 18-24, 2010. The interviews were conducted at the Center for Opinion Research at Franklin & Marshall College under the direction of the poll's Director Dr. G. Terry Madonna, Head Methodologist Berwood Yost, and Senior Project Manager Angela Knittle. The data included in this release represent the responses of 720 adult residents of Pennsylvania, including 631 registered adults (271 Democrats, 256 Republicans, 79 registered as Independent/Other, and 25 who refused to identify party). Telephone numbers for the survey were generated using random digit dialing, and respondents were randomly selected from within each household. Survey results were weighted (age, education, race, region, and gender) using an iterative weighting algorithm.

The sample error for this survey is +/- 3.7 percentage points. The sample error for registered adults is +/- 3.9 percentage points, and the subsample of likely voters (n=489) has a sample error of +/- 4.4 percentage points.

In addition to sampling error, this poll is also subject to other sources of non-sampling error. Generally speaking, two sources of error concern researchers most. Non-response bias is created when selected participants either choose not to participate in the survey or are unavailable for interviewing. Response errors are the product of the question and answer process. Surveys that rely on self-reported behaviors and attitudes are susceptible to biases related to the way respondents process and respond to survey questions.

The Franklin & Marshall College Poll is produced in conjunction with the Philadelphia Daily News, WGAL-TV (South Central PA), Pittsburgh Tribune Review, WTAE-TV (Pittsburgh), WPVI-TV6/ABC (Philadelphia), Times-Shamrock Newspapers, Harrisburg Patriot-News, and Lancaster Newspapers. It may be used in whole or in part, provided any use is attributed to Franklin & Marshall College.

Key Findings

The October 2010 Franklin and Marshall College Poll of Pennsylvania residents finds that the races for US senate and governor evidence some changes since the September Poll, most notably in the visibility of candidates and the diminishing number of undecided voters. The survey also finds that important electoral indicators continue to favor Republican candidates in the state. In the senate race, Republican Pat Toomey leads Democrat Joe Sestak by two points among registered adults and by seven points among those more likely to vote. Republican Tom Corbett leads Democrat Dan Onorato in the race for governor by twelve points among registered adults and by fifteen points among those more likely to vote. The advantages held by the Republican candidates in both races increase as likely voter screens become more restrictive. In both races, one in four registered adults is undecided.

The unusually large proportion of Pennsylvania registered adults who have not heard enough about the gubernatorial candidates to form an opinion of them (31% for Corbett and 33% for Onorato) remains high for this point in the election cycle as it was in September. In Pennsylvania's last open-seat gubernatorial election in 2002, both candidates were much better known by the registered adults at the end of October. While the major party candidates in both races have become better known since September, the Democratic candidates in both races are now viewed more unfavorably than favorably by the state's registered adults.

US Senate Race

In the Pennsylvania US senate race, Republican Pat Toomey leads Democrat Joe Sestak by two points among registered adults (37% to 35% with 27% undecided) and by seven points among those most likely to vote (43% to 36% and 19% undecided). When registered adults who “lean” toward a candidate are included in these figures, Toomey’s lead among likely voters is the same (48% to 40% with 12% undecided). Toomey’s lead has changed little since August. Toomey has an advantage among men, whites, and in most regions of the state (see Table A-1), which is mostly consistent with the support he received in the September survey.

Preferences in the senate race continue to be largely driven by feelings about the president and the Democratic majority in Congress. About two in three (62%) Toomey supporters say their vote is mainly against the president, while half of Sestak supporters (48%) say their vote is mainly a vote in support of the president.

Both senate candidates have increased their recognition among the state’s registered adults since September, although Sestak is viewed more unfavorably (34%) than favorably (23%) by the state’s electorate. About one in four registered voters report they did not know enough about the senate candidates to have an opinion about them.

Figure 1. 2010 Pennsylvania U.S. Senate Election Preferences

If the 2010 election for U.S. SENATOR were being held today and the candidates included (rotated) Joe Sestak, the Democrat, and Pat Toomey, the Republican, would you vote for Joe Sestak, Pat Toomey, some other candidate, or aren't you sure how you would vote?

Note: Chart displays registered voters except where indicated.

Governor's Race

Republican Tom Corbett leads Democrat Dan Onorato in the race for governor by twelve points among registered adults (42% to 30% with 26% undecided) and by fifteen points among those most likely to vote (47% to 32% with 19% undecided). When registered adults who “lean” toward a candidate are included, Corbett’s lead remains about the same among likely voters (51% to 35% with 11% undecided). Corbett has an advantage in most demographic groups, but particularly among men, whites, and Independents (see Table A-2).

More registered adults view Tom Corbett favorably than unfavorably (35% to 17%) while one in three (31%) have not heard enough about him to have an opinion. Dan Onorato is now viewed more unfavorably than favorably (28% to 23%) while

one in three (33%) have not heard enough about him to have an opinion. Both candidates have increased their name identification since August; Corbett's increases have been more favorable than Onorato's.

The large proportion of Pennsylvania registered adults who have not heard enough about the gubernatorial candidates to form an opinion of them continues to be unusually high for this point in the election cycle. In the last open-seat gubernatorial election in Pennsylvania in 2002, both candidates were much better known by the voters at the end of October (19% did not know enough about Republican Mike Fisher and 7% did not know enough about Democrat Ed Rendell to have an opinion). It may be that the US Senate race has diverted voters' attention from the gubernatorial campaign.

Figure 2. 2010 Pennsylvania U.S. Gubernatorial Election Preferences

If the 2010 election for GOVERNOR were being held today and the candidates included (rotated) Tom Corbett, the Republican, and Dan Onorato, the Democrat, would you vote for Tom Corbett, Dan Onorato, or aren't you sure how you would vote?

Note: Chart displays registered voters except where indicated.

The Electoral Context in Pennsylvania

The 2006 election year was the most recent with races for both US senate and governor in Pennsylvania. In the 2006 election, Democrats retained the governor's office, knocked off an incumbent Republican US senator, and picked up four US house seats held by Republicans. Polling in the 2006 campaign showed positive electoral indicators for Democrats that helped them to those victories.

Pennsylvania politicians are facing a distinctly different political environment than they did during the 2006 election cycle. Pessimism about the direction of the state is greater, job performance ratings for the incumbent governor are much lower, the incumbent president is unpopular, and Democrats' advantage over Republicans in party identification and particularly voter interest has shrunk (see Table 1).

Democrats are at a decided disadvantage when it comes to voter motivation. Only 36 percent of Democrats fall into the most likely to vote category compared to 49 percent of Republicans. This, for example, gives the Republicans a 12 point advantage on the generic congressional ballot question (46% to 34%) when only likely voters are considered. Another example of the gap in partisan enthusiasm is that only one in three (33%) of those who voted for Obama in 2008 are in the most likely to vote category versus half (52%) of McCain voters.
